# Door Restrictor

Passengers who become trapped in elevators may try to self-evacuate by opening the car doors between landings, putting themselves at risk of serious injury or death. It is important that trapped passengers remain in the elevator until trained personnel arrive, or until power is restored to the system and the car resumes normal operation.

## Vertical Express Door Restrictors

The door restrictor prevents the elevator car doors from being opened if the elevator is not within the unlocking zone, which ensures that doors remain closed until appropriate action can be taken.

### Features

- Elevator Safety Code Compliance
- Universal Product Application
- Reduce Owner Liability

### Restrictor Clutch

The resistor clutch is mounted to the car door with a simple linkage arrangement. It is mechanical and can be used on all new equipment or retrofit installations.

### Hoistway Door Restrictor Kit

The hoistway door restrictor kit is mounted directly to the car door, with two vanes mounted at each floor. This design is ideal for low-rise applications and, once installed, is virtually maintenance-free.
