# Nylube Gib Package

For passenger safety, inspecting elevator doors and door gibs is an important part of regular maintenance.

Door gibs are located at the bottom of the hoistway doors, and travel in the sill track to hold the doors in place as they open and close. They can often be broken or bent when the doors hit, and some need to be replaced because of worn sills or misaligned doors.

Vertical Express is proud to offer the high quality Nylube Gib Package to replace any damaged door gibs found during your elevator inspections.

Nylube Gib Package
