Overspeed Valves

Protect against catastrophes with Overspeed Valves.

An Overspeed Valve provides safer hydraulic elevator operation by stopping the elevator car from falling when the downward speed exceeds normal operating speed.

Why you should upgrade.

Overspeed Valves protect hydraulic elevators against oil supply line failure between the valve and the power unit. An Overspeed Valve closes and protects against potential catastrophe by stopping the elevator car from rapid, uncontrolled descent. The valve requires no electricity because it operates on pressure drop. A flow meter within the valve measures the amount of oil passing through it. If the oil exceeds the normal flow, the Overspeed Valve automatically closes off.

Features and benefits.

- Automatically resets after each use
- New design fits into each specific application properly
- Enhances peace of mind
- Reduces risk of an uncontrolled elevator descent

Overspeed Valves from Vertical Express offer compact, unibody design and require no electricity to operate. Safe equipment equals safe passengers!
