From: CEC Technical Support Department

Subject: Proper Setting of Protective Features

In order to prevent certain conditions from occurring during specific modes of operation (such as run-time out errors and re-leveling) the following car CSW bits must be SET.

CS2 Bit 5   <BITS2,5> <WRT>

CS7 Bit 0   <BITS7,0> <WRT>

<u>Please ensure that these bits are set on all SWIFT FUTURA controllers.</u>

In the future these bits will be set internally by default, and will not be bit selectable.

Thank you for your cooperation.
